I claim:

- 1. A method for treating a cardiovascular disease in a mammal the method comprising the step of administering an effective amount of a botulinum toxin directly to a blood vessel of a mammal, thereby treating a cardiovascular disease.
- 2. The method of Claim 1 wherein the mammal is having or has had a cardiovascular procedure.

10

5

- The method of Claim 1 wherein treating the cardiovascular disease prevents restenosis.
- 4. The method of Claim 2 wherein the cardiovascular procedure is an arterial cardiovascular procedure.
 - 5. The method of Claim 2 wherein the cardiovascular procedure is a coronary arterial cardiovascular procedure.
- 20 6. The method of Claim 2 wherein the cardiovascular procedure includes angioplasty.
 - 7. The method of Claim 6 wherein the angioplasty does not include the step of inserting a stent into the blood vessel.

25

- 8. The method of Claim 1 wherein the administering includes the step of injecting the botulinum toxin into a wall of the blood vessel.
- 30
- 9. The method of Claim 1 wherein the step of administering is accomplished using a stent coated or impregnated with the botulinum toxin.

- 10. The method of Claim 1 wherein the botulinum toxin reduces or eliminates damage to a blood vessel.
- 5 11. The method of Claim 10 wherein the botulinum toxin reduces or eliminates damage to a blood vessel by dilating the blood vessel.
- 12. The method of Claim 10 wherein the botulinum toxin reduces or eliminates damage to a blood vessel by reducing or eliminating inflammation of the blood vessel.
 - 13. The method of Claim 1 wherein the botulinum toxin is selected from the group consisting of botulinum toxin types A, B, C, D, E, F, G mixtures thereof and combinations thereof.
 - 14. The method of Claim 1 wherein the botulinum toxin is botulinum toxin type A.
- 15. A method of preventing restenosis in a blood vessel in a mammal which may occur following a cardiovascular procedure, the method comprising the step of administering to a mammal an effective amount of a botulinum toxin thereby preventing restenosis in a blood vessel.

25

30

15

16. A method of preventing restenosis in a mammal by preventing damage in a blood vessel which may occur during or following a cardiovascular procedure, the method comprising the step of administering to a mammal an effective amount of a botulinum toxin thereby preventing damage in the blood vessel and preventing restenosis.

17. A method of preventing restenosis in a mammal by preventing inflammation in a blood vessel which may occur during or following a cardiovascular procedure, the method comprising the step of administering to a mammal an effective amount of a botulinum toxin thereby preventing inflammation in the blood vessel and preventing restenosis.

_5

10

- 18. A method of preventing restenosis in a mammal by dilating a blood vessel proceeding or during a cardiovascular procedure, the method comprising the step of administering to a mammal an effective amount of a botulinum toxin thereby dilating the blood vessel and preventing restenosis.
- 19. A composition for use in a cardiovascular procedure comprising a stent with a botulinum toxin attached or imbedded therein.
 - 20. The composition of Claim 19 wherein the botulinum toxin is botulinum toxin type A.
